

VersaTube™

TAPERED TRACHEOSTOMY TUBE

Treatment Versatility

Long length (sizes available up to 98 mm) enables use in a wider variety of patient types, from normal to those with larger necks, while a 15 mm connector on the main tube makes inner cannula use optional.

Decreased Risk of Trauma

Tapered distal tip creates a smooth transition from loading obturator to tracheostomy tube outer diameter, minimizing insertion force and the potential for tracheal wall trauma.

Ease of Use

Familiar ISO-standard sizing creates easy conversion from ETT to tracheostomy tube, and convenient color-coding system facilitates simple and efficient identification of desired tube and inner cannula size.

Enhanced Patient Comfort

Soft PVC blend material gently conforms to patient anatomy to maximize comfort and help prevent damage to internal structures.
