

Male fertility

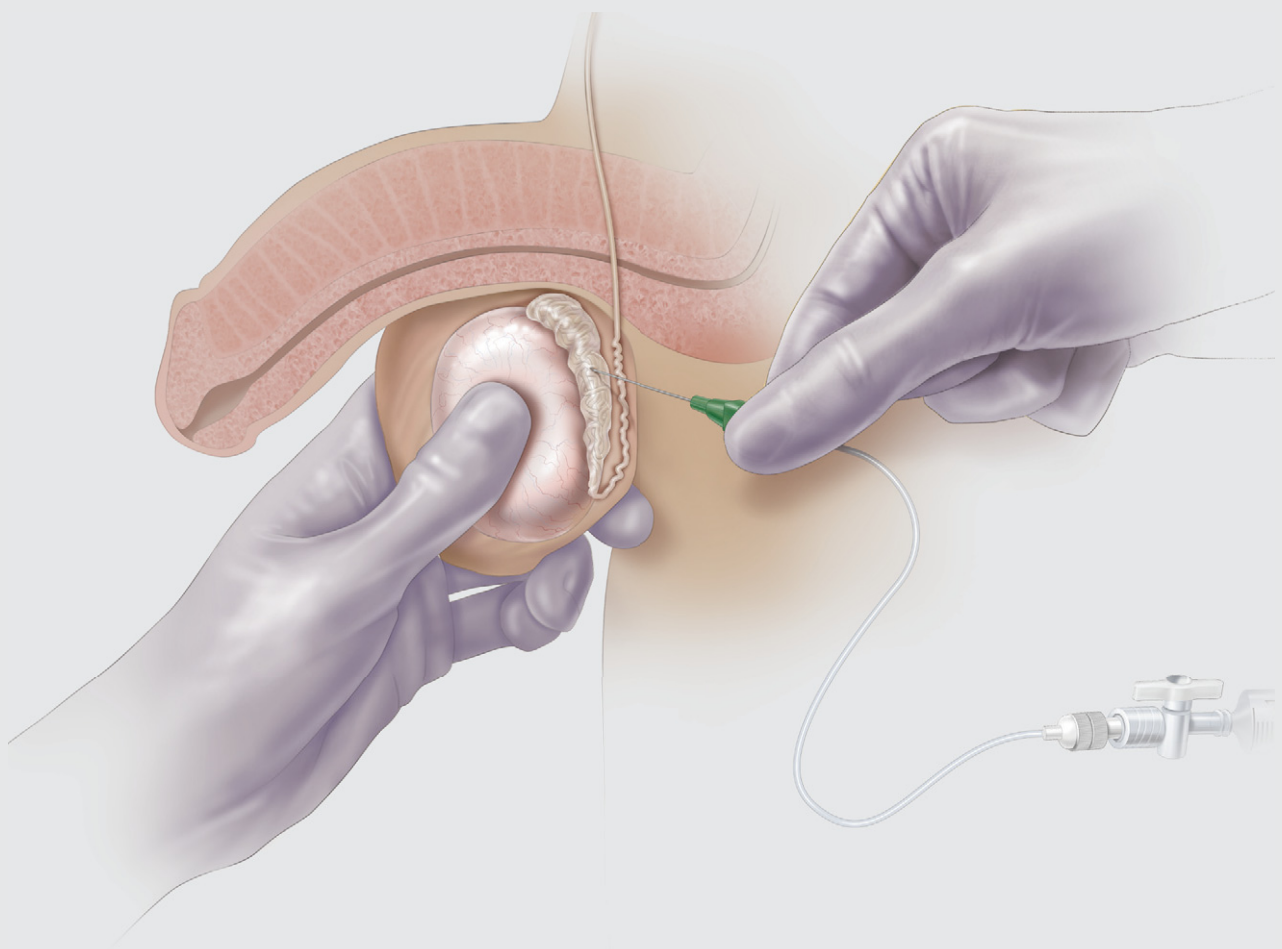

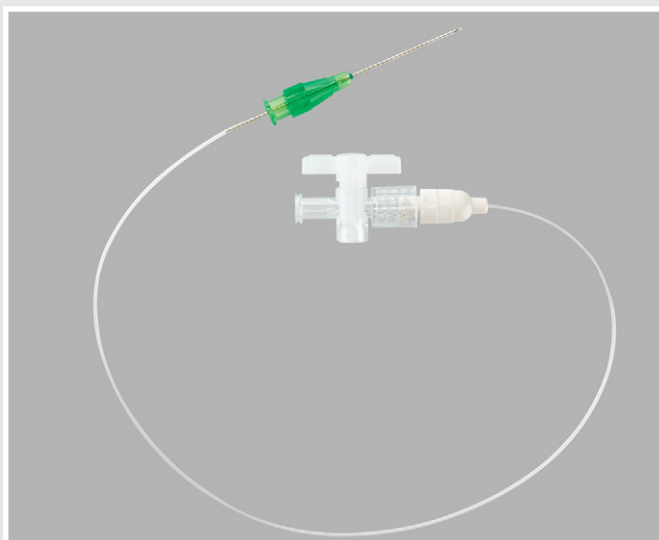

Illustration by Lisa Clark

Male fertility

Investigating the barriers to a successful pregnancy requires a comprehensive approach. Cook Medical can provide physicians with catheters and needles that are designed for male fertility testing. The Silber Aspiration Catheter allows physicians to aspirate epididymal fluid directly from the patient. The LabCath™ Catheter allows physicians to aspirate fluid from vials.

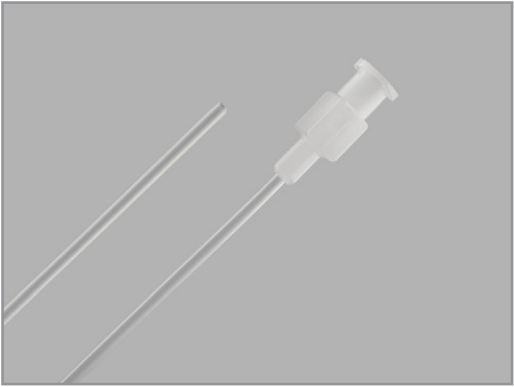

Testicular Sperm Aspiration Needle

In 1998, we became the first company to produce needles specifically for sperm aspiration. The Testicular Sperm Aspiration Needle enables physicians to withdraw sperm from the testicular tissue.
