

Transluminal Biliary Biopsy Forceps Set

NEW PRODUCT INFORMATION

Achieve percutaneous biliary access and perform transluminal forceps biopsy with one efficient set.

What clinical advantages does this product offer over current methods?

- The set allows you to establish percutaneous access for drainage procedures and to perform transluminal forceps biopsies of biliary strictures during a single, efficient procedure.
- The novel technique of advancing the wire guide beyond the area of biopsy and pushing the sheath and forceps into the lesion allows you to maintain access. The Flexor sheath positioned against the stricture allows you to use the forceps to penetrate more deeply to obtain a reliable and accurate sample.

What supply chain advantages does this product offer over current methods?

- The Transluminal Biliary Biopsy Forceps Set combines five separate products into one efficient package, increasing efficiency in space and cost. This set, combined with Cook's complementary line of biliary drains, allows your facility to streamline and simplify the purchasing process.
